DEVON SERVICEPACK 1 UPDATED

Bietigheim-Bissingen (Germany, EU), 17th of June, 2002 -- DEVONtechnologies has updated it's ServicePack 1, consisting of three top-rated freeware tools: AntiWordService 1.0.1, CalcService 2.7 and WordService 2.3.1.

Thanks to overwhelming support from users from all over the world, the latest version of CalcService now features a French and WordService 2.3.1 an Italian localisation as well as improvements in the German and Danish localisations. CalcService 2.7 also comes with improved number formatting. Last but not least, AntiWordService 1.0.1 now theoretically supports Word documents without the proper file name extension ».doc«. Due to a bug in Mac OS X up to version 10.1.5, this feature does not work yet, but but it will as soon as the system works according to Apple's documentation.

AntiWordService enables all well-behaved Cocoa applications able to read plain text, for example TextEdit or DEVONthink Personal Edition, to open Microsoft Word documents. CalcService and WordService insert new commands into the Services submenu allowing to make simple calculations and reformat text within any Cocoa application, for example TextEdit, Mail, ProjectBuilder, OmniWeb or DEVONthink Personal Edition. CalcService replaces a selected formula by the result of the calculation sending Calculator.app into retirement, and WordService provides a variety of 30 functions for converting, formatting, sorting or speaking text, inserting the current date, time or folder contents, and showing statistics about selected text.

AntiWordService, CalcService and WordService require Mac OS X 10.1.5 or higher and are available as »ServicePack 1« or as separate files for free download from www.devon-technologies.com.
